

Assess Your Email Risk With the Fortinet Cyber Threat Assessment Program

Quantify the Amount of Unwanted, Malicious, and Risky Email Reaching Your Users

With organizations increasingly migrating to M365, email security continues to be a critical part of an organization's layered defense against cyberattacks. According to the latest Verizon DBIR, Business Email Compromise has doubled in the past 12 months and is now the second most common method of social engineering. The report also states that there is a 35% chance that a malicious link contained within a "credible-looking" phishing email received in a user's inbox will be clicked on by the user.

The FortiGuard Threat Landscape Report for the first half of 2021 goes on to explain that "email continues to be a magnet for threat actors." A modern secure email gateway should be able to scan email attachments and links, as well as forward the email to a cloud-based sandbox for further investigation.

If you have recently moved to M365 and are wishing to validate your current email security effectiveness, then an email risk assessment could be the next step for you.

The assessment will look at:

- Security:** How effective are your current email filters? Utilize the consistently top-rated FortiGuard Labs intelligence to learn more about known or suspected malware, phishing, business email compromise, and other threats entering your organization.
- Productivity:** Are email recipients exposed to unwanted or inappropriate content? Learn more about the spam, newsletters, and even adult content that may be reaching inboxes.
- Utilization:** What is your email traffic profile? Understand whether your organization appears to be at greater risk than the average, what the user experience and bandwidth use look like, and more.

#	Rating	Malware	Count
1	4	hash{59259401da43fb152d19e6a6355de68e4c47d65831628bf196e1e311c4d0}	5
