

Demystify Your WAN Edge with a Secure SD-WAN Assessment Report

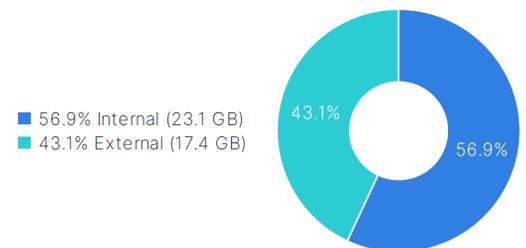

Get Visibility Into Your Application Usage, Security Posture, and Bandwidth Utilization

Are you running into challenges with your legacy WAN architecture due to digital innovation initiatives at branch offices? Do you have visibility and control over applications running at your WAN Edge? Is your security posture strong enough at branch locations as you increase cloud connectivity? Are ever-increasing bandwidth requirements increasing MPLS operational costs? Obtaining a Secure SD-WAN Assessment Report will help you find answers to these questions.

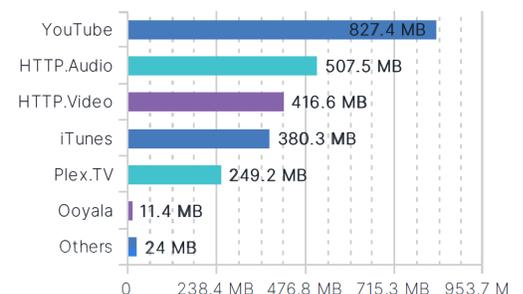

Validate the application performance, cloud connectivity optimization, security posture, and operational costs of your WAN Edge by enlisting expert guidance. A Fortinet expert will use a FortiGate Secure SD-WAN solution to monitor key indicators within your network. After several days of gathering information, you will receive a Secure SD-WAN Assessment Report which is divided into three primary sections:

- Application Visibility and Experience** – What applications are used and how are they used within your network? Discover applications connecting to both internal and external resources. Learn more about the top applications and their bandwidth usage across different categories from VoIP/video, collaboration, social media, and more. Verify the performance and usage of applications that are operating in accordance with your corporate SLA and usage policies.
- Security and Threat Prevention** – How are you securing the traffic breaking out locally from the branch? Find out more about the high-risk applications used in your network, top threats based on application vulnerability exploits detected, and even identify devices/hosts which are currently at risk in your network. Ensure your security is not already compromised as you optimize your organization’s cloud connectivity. Finally, enhance your user application experience by leveraging the integrated next-generation firewall capabilities within FortiGate Secure SD-WAN.
- Bandwidth Utilization and Performance** – How optimized is your bandwidth utilization across your distributed branch locations? Find out which locations consume the most bandwidth and further analyze by top bandwidth-consuming host and destination resources. Ensure your WAN links are utilized and optimized for cost-effective operations without compromising user experience.

#	Risk	Application	Category	Technology	Users	Bandwidth	Sessions
1	5	Asprox.Botnet	Botnet	Client-Server	1	1.74 MB	587
2	5	Proxy.HTTP	Proxy	Network-Protocol	11	7.10 MB	457
3	5	Hotspot.Shield	Proxy	Client-Server	2	203.99 KB	8
4	5	Skyfire	Proxy	Client-Server	3	27.20 KB	3
5	4	Rsh	Remote Access	Client-Server	67	9.82 GB	302,237
6	4	BitTorrent	P2P	Peer-to-Peer	8	1.79 MB	5,096
7	4	Telnet	Remote Access	Client-Server	9	37.81 MB	681
8	4	RDP	Remote Access	Client-Server	14	9.89 MB	48
9	4	TeamViewer	Remote Access	Client-Server	22	1.13 MB	38
10	4	FlashGet	P2P	Peer-to-Peer	3	309.78 KB	37
